RESEARCH INTERESTS

My interests span across areas of information security, applied cryptography, and privacy-enhancing technologies. I design and implement protocols for secure multi-party computation (MPC) based on secret sharing for a variety of practical applications, such as privacy-preserving machine learning, sustainability, and outsourcing. Additionally, I research how to quantify information disclosure from arbitrary secure function evaluations through information-theoretic approaches. I am also interested in post-quantum cryptographic techniques.

EDUCATION

PhD, Computer Science , University at Buffalo Advisor: Marina Blanton	Aug. 2024
MS, Cybersecurity , Fordham University Advisor: Thaier Hayajneh	May 2019
BS, Physics , Fordham University Minor, Mathematics	May 2017

WORK EXPERIENCE

Research/Teaching Assistant , Computer Science University at Buffalo	Jun. 2019 – July 2024
Adjunct Assistant Professor , Physics Fordham University	Aug. 2017 – May 2019
Graduate Research Assistant , Cybersecurity Fordham University	Aug. 2017 – May 2019

PROJECTS

MPC and Privacy-Preserving Machine Learning

2020 – Present

University at Buffalo

[Repository](#)

- Designed a comprehensive ring-based framework of replicated secret sharing multi-party protocols for an arbitrary number of parties in the semi-honest (passively secure), honest majority setting.
- Implemented protocol constructions in C++ and extensively benchmarked our framework, obtaining an up to $33\times$ performance gain over existing state-of-the-art secret sharing techniques.
- Applied techniques to privacy-preserving machine learning tasks, including (quantized) neural network inference and support vector machine classification.
- Discovered an algebraic optimization for secure quantized neural network inference that significantly improved efficiency and led to an over $2\times$ improvement over prior works.

PICCO Compiler

2022 – Present

University at Buffalo

[Repository](#)

- Core developer and maintainer of *PICCO*, a source-to-source compiler used to translate general-purpose programs into their secure implementations for deployment in a distributed setting.
- Extensively optimized existing field-based protocol implementations, while simultaneously performing a large-scale refactor to improve future maintainability and support extensibility to stronger security settings.
- Integrated ring-based protocol constructions into the compiler to support general-purpose computation over integer and floating-point inputs.
- Mentored a summer REU student tasked with optimizing the compiler's networking functionalities.

Disclosure Analysis from Secure Function Evaluation

2021 – Present

University at Buffalo

[Repository](#)

- Designed a novel information-theoretic approach for evaluating the information disclosure about private inputs from the output of secure function evaluations.
- Comprehensively analyzed a practically significant statistical function (the average salary) through extensive theoretical and analytical analysis in a variety of computational configurations.
- Applied our framework to complex descriptive statistical functions in conjunction with data-driven techniques to estimate the information disclosure.

Implementation of the Apple PSI System
University at Buffalo

2021
[Repository](#)

- Analyzed and developed proof-of-concept Python implementation of Apple’s threshold private set intersection system for oblivious detection of harmful media.

Blockchain Applications in Healthcare
Fordham University

2017 – 2019

- Led the design of one of the first frameworks that fused blockchain and healthcare into a HIPAA-compliant IoT remote patient monitoring system, based on the Ethereum protocol.
- Assisted in prototype smart contract development in Solidity to support real-time automated monitoring.

PUBLICATIONS

Thesis

- [1] **A. Baccarini**. New Directions in Secure Multi-Party Computation: Techniques and Information Disclosure Analysis. *PhD Thesis*, University at Buffalo, 2024.

Conference Proceedings

PROFESSIONAL SERVICE

Conference Committees

USENIX Security Symposium, artifact evaluation committee member	2024
USENIX Security Symposium, artifact evaluation committee member	2023

Conference and Journal Refereeing

IEEE Transactions on Information Forensics and Security (TIFS)
 IEEE Transactions on Dependable and Secure Computing (TDSC)
 European Symposium on Research in Computer Security (ESORICS)
 IEEE/ACM International Conference on Automated Software Engineering (ASE)
 Multidisciplinary Digital Publishing Institute (MDPI) Entropy, Sensors, Symmetry, Information
 Hawaii International Conference on System Sciences (HICSS)

AWARDS AND RECOGNITION

Alan Selman Scholarship , University at Buffalo	Mar. 2024
First place \$2000 cash prize, focus in theoretical computer science	
GSAS Centennial Scholarship , Fordham University	2017 – 2019
Tuition and stipend support	

TECHNICAL SKILLS

Cryptographic	secure multi-party computation, secret sharing, differential privacy, encryption, signatures and commitments, zero-knowledge proofs
Languages	C/C++, Python, Bash, Lua, Solidity, \LaTeX
Developer	Git, SVN, Neovim, VS Code, Unix
Libraries	GNU MP and MPFR, OpenSSL, NumPy, Matplotlib, TensorFlow

TEACHING

At the **University at Buffalo:**

CSE 116 Computer science II (Instructor)	2 semesters
CSE 4/529 Algorithms for Modern Computing Systems	3 semesters
CSE 4/531 Analysis of Algorithms	1 semester
CSE 542 Software Engineering Concepts	1 semester

At **Fordham University:**

PHYS 1511/12 Physics I/II Lab (Instructor)	4 semesters
